

Wine for Users

Wine is...

- A compatibility layer designed to run Windows applications on Posix-compatible operating systems (Linux, Mac OSX, FreeBSD)

Limitations

- Hardware drivers
- USB devices
- DRM & Anti-cheat programs
- Limitations of the host system
- Not a sandbox
- “Bug for bug compatibility”

Troubleshooting

- Wine version?
- Clean wineprefix?
- AppDB reports/howtos?
- Error messages from the app/game?
- Terminal output?
- Known bug?

Non-developer volunteers

- Testing and reporting
 - Bugzilla
 - AppDB
- AppDB maintainer
- Wiki
- User support and bug triage
 - User's forum
 - Bugzilla
